+1 438-925-5688 | jith013@gmail.com | <https://www.linkedin.com/in/sujith013/> | <https://github.com/Sujith013> | Montreal, QC

TECHNICAL SKILLS

Programming Languages: C#, Java, Python, C, C++, JavaScript, TypeScript

Web Technologies: React, Node.js, Express.js, Angular, .NET, Scala, MVC, ASP.NET Core, Spring Boot, Spring MVC, HTML, CSS, PHP

Platforms & Tools: .NET Framework, Docker, Kubernetes, Jenkins, Git, Github, GitLabs, JIRA, Visual Studio, VS Code, IntelliJ, REST API, OAuth, JWT, VMWare, Azure, GCP

Databases: SQL, NoSQL, MySQL, PostgreSQL, MongoDB, GraphQL, Firebase

Development Practices: Agile (Scrum), CI/CD, Object-Oriented Design (OOD), Data Structures, Design Patterns, Unit Testing, Software Testing

Leetcode: 163 problems solved (102 medium and hard problems)

EDUCATION

Concordia University, Montreal

Master of Applied Computer Science, GPA: 3.98/4.30

Sept 2024 – Expected Aug 2026

Montreal, Canada

PROJECTS

Full-Stack Finance Portfolio System [Github Link](#)

Jan 2025 – Apr 2025

React, TypeScript, .NET, SQL, JWT, Docker, GitLab

- Developed a full-stack finance web application that lets users monitor real-time stock market trends and manage personal portfolios, helping individuals make informed investment decisions. Built a responsive frontend with React and TypeScript using Tailwind CSS, ensuring users can easily track their holdings and view financial insights on any device.
- Designed and implemented a robust backend with ASP.NET providing RESTful APIs that deliver secure login, real-time data, and seamless portfolio updates. Structured and maintained SQL databases to store user profiles, stock data, comments, and portfolio records, ensuring data consistency and fast retrieval.
- Integrated external financial APIs with Axios to automatically update stock prices and news, giving users access to fresh market information without manual refresh. Implemented JWT-based authentication to protect sensitive user data and restrict access to authorized actions only.
- Containerized the application using Docker so it could run reliably across different environments, simplifying deployment and scaling. Configured GitLab CI/CD pipelines to automate testing and deployment, accelerating updates and reducing manual errors.

Youtube Lytics [Github Link](#)

Sept 2024 – Dec 2024

Play Framework, Java, Maven, Git, JUnit, Mockito, Javadoc

- Developed a full-stack analytics web application using the Play Framework and Java 8, integrating the YouTube API to fetch and analyze live video content based on keyword searches to help users track trends instantly.
- Engineered a reactive server-push architecture with WebSockets and Apache Pekko Actors to dynamically stream live search results, improving user engagement through real-time updates. Implemented per-user WebSocket actors to keep search history and aggregate results in isolated sessions, supporting concurrent users without data conflicts.
- Built modular actor components for channel profiles, sentiment analysis, and tag extraction, which improved scalability and made the system fault-tolerant through actor supervision and automatic recovery from API failures.
- Applied functional programming with Java Streams API, lambdas, and collector pipelines to transform and filter large datasets efficiently and declaratively. Wrote unit tests with JUnit covering actors, controllers, and services; used Mockito to mock the YouTube API, ensuring reliable automated testing.
- Streamlined builds and development with Maven and agile workflows, speeding up deployment and iteration cycles.
- Documented the codebase using Javadoc, improving maintainability and easing onboarding for new developers.

Ptorts - A social Media APP for Pets [Github Link](#)

Sept 2022 – Dec 2022

React, Node.JS, Express.JS, MongoDB, Firebase, Redux, React Routers

- Designed and developed a full-stack pet adoption platform using the MERN stack (MongoDB, Express.js, React, Node.js) that connects pet owners and adopters through user-uploaded pet videos to promote pet adoption.
- Engineered secure backend APIs with Node.js and Express to handle user authentication, video uploads, likes, and crypto wallet transactions, enabling trusted donations directly to pet owners.
- Integrated Firebase Storage to host videos and images at scale, ensuring fast and reliable content delivery.
- Built a responsive React frontend allowing users to browse pets, watch videos, and make crypto donations.
- Implemented secure wallet management and Polygon (MATIC) crypto integration so supporters can donate transparently and owners receive funds without intermediaries.
